Overview

This document provides the details of an OVP Fast Processor Model variant.

OVP Fast Processor Models are written in C and provide a C API for use in C based platforms. The models also provide a native interface for use in SystemC TLM2 platforms.

The models are written using the OVP VMI API that provides a Virtual Machine Interface that defines the behavior of the processor. The VMI API makes a clear line between model and simulator allowing very good optimization and world class high speed performance. Most models are provided as a binary shared object and also as source. This allows the download and use of the model binary or the use of the source to explore and modify the model.

The models are run through an extensive QA and regression testing process and most model families are validated using technology provided by the processor IP owners. There is a companion document (OVP Guide to Using Processor Models) which explains the general concepts of OVP Fast Processor Models and their use. It is downloadable from the OVPworld website documentation pages.

1.1 Description

Microblaze Processor Model

1.2 Licensing

Apache 2.0 Open Source License

1.3 Features

Instruction Set: This model fully implements the instruction set upto and including V10.

Privileged Instructions: Implemented

Virtual-Memory Management: Implemented

Reset, Interrupts, Exceptions and Break: Implemented

Floating Point Unit: Implemented

Stream Link Interface: Implemented

1.4 Limitations

GDB: There is a known issue in the microblaze gdb, a lockup can occur when disassembling from address 0

1.5 ConfigurationFeatures

Barrel Shifter.

Hardware Divider.

Machine Status Set/Clear Instructions.

Hardware Exceptions.

Pattern Compare Instructions.

Floating Point Unit (FPU).

Disable Hardware Multiplier.

Processor Version Register (PVR).

Hardware Multiplier 64-bit Result.

Floating Point Conversion and Square Root Instructions.

Memory Management Unit.

Extended Stream Instructions .

Count Leading Zeros Instruction.

Memory Barrier Instruction.

Allow Stream Instructions in User Mode.

Load/Store Exclusive over AXI4

1.6 Verification

Models have been validated correct by running through extensive tests using test suites and technology provided by Xilinx

Configuration

2.1 Location

This model's VLNV is xilinx.ovpworld.org/processor/microblaze/1.0.

The model source is usually at:

\$IMPERAS_HOME/ImperasLib/source/xilinx.ovpworld.org/processor/microblaze/1.0

The model binary is usually at:

\$IMPERAS_HOME/lib/\$IMPERAS_ARCH/ImperasLib/xilinx.ovpworld.org/processor/microblaze/1.0

2.2 GDB Path

The default GDB for this model is: \$IMPERAS_HOME/lib/\$IMPERAS_ARCH/gdb/microblaze-xilinx-elf-gdb.

2.3 Semi-Host Library

The default semi-host library file is xilinx.ovpworld.org/semihosting/microblazeNewlib/1.0

2.4 Processor Endian-ness

This model can be set to either endian-ness (normally by a pin, or the ELF code).

2.5 QuantumLeap Support

This processor is qualified to run in a QuantumLeap enabled simulator.

2.6 Processor ELF code

ELF codes supported by this model are:0xbd and 0xbaab.

All Variants in this model

This model has these variants

| Variant | Description |
|---------|------------------------------|
| V7_00 | |
| V7_10 | |
| V7_20 | |
| V7_30 | |
| V8_00 | |
| V8_10 | |
| V8_20 | |
| V9_50 | |
| V10_00 | (described in this document) |

Formal Parameters

| Name | Type | Description |
|-----------------------------|-------------|---|
| variant | Enumeration | Selects variant (either a generic ISA or a specific |
| | | model) |
| verbose | Boolean | Specify verbose output messages |
| endian | Endian | Model endian |
| C_FAMILY | Uns32 | Target Family |
| C_AREA_OPTIMIZED | Uns32 | Select implementation to optimize area with lower in- |
| | | struction throughput |
| C_INTERCONNECT | Uns32 | Select interconnect $1 = PLBv46$, $2 = AXI4$ |
| C_ENDIANNESS | Uns32 | Select endianness $0 = \text{Big endian}, 1 = \text{Little endian}$ |
| C_FAULT_TOLERANT | Uns32 | Implement fault tolerance |
| C_ECC_USE_CE_EXCEPTION | Uns32 | Generate Bus Error Exceptions for correctable errors |
| C_PVR | Uns32 | Processor version register mode selection |
| C_PVR_USER1 | Uns32 | Processor version register USER1 constant |
| C_PVR_USER2 | Uns32 | Processor version register USER2 constant |
| C_RESET_MSR | Enumeration | Reset value for MSR register (0x00, 0x20, 0x80 or |
| | | 0xa0 |
| C_BASE_VECTORS | Uns32 | Location of Microblaze Vectors |
| C_D_PLB | Uns32 | Data side PLB interface |

Hierarchy of the model

A CPU core may be configured to instance many processors of a Symmetrical Multi Processor (SMP). A CPU core may also have sub elements within a processor, for example hardware threading blocks.

OVP processor models can be written to include SMP blocks and to have many levels of hierarchy. Some OVP CPU models may have a fixed hierarchy, and some may be configured by settings in a configuration register. Please see the register definitions of this model.

This model documentation shows the settings and hierarchy of the default settings for this model variant.

11.1 Level 1

This level in the model hierarchy has 3 commands.

This level in the model hierarchy has 3 register groups:

| Group name | Registers |
|---------------------|-----------|
| User | 32 |
| System | 25 |
| Integration_support | 1 |

Table 11.1: Register groups

This level in the model hierarchy has no children.

Model Commands

A Processor model can implement one or more **Model Commands** available to be invoked from the simulator command line, from the OP API or from the Imperas Multiprocessor Debugger.

12.1 Level 1

12.1.1 dumpTLB

12.1.1.1 Argument description

Display the current contents of the TLB

12.1.2 isync

specify instruction address range for synchronous execution

| Argument | Type | Description |
|------------|-------|--|
| -addresshi | Uns64 | end address of synchronous execution range |
| -addresslo | Uns64 | start address of synchronous execution range |

Table 12.1: isync command arguments

12.1.3 itrace

enable or disable instruction tracing

| Argument | Type | Description |
|-------------------|---------|---|
| -after | Uns64 | apply after this many instructions |
| -enable | Boolean | enable instruction tracing |
| -instructioncount | Boolean | include the instruction number in each trace |
| -memory | String | show memory accesses by this instruction. Ar- |
| | | gument can be any combination of X (execute), |
| | | L (load or store access) and S (system) |
| -off | Boolean | disable instruction tracing |
| -on | Boolean | enable instruction tracing |
| -processorname | Boolean | Include processor name in all trace lines |
| -registerchange | Boolean | show registers changed by this instruction |

| -registers | Boolean | show registers after each trace |
