## Overview

This document provides the details of an OVP Fast Processor Model variant.

OVP Fast Processor Models are written in C and provide a C API for use in C based platforms. The models also provide a native interface for use in SystemC TLM2 platforms.

The models are written using the OVP VMI API that provides a Virtual Machine Interface that defines the behavior of the processor. The VMI API makes a clear line between model and simulator allowing very good optimization and world class high speed performance. Most models are provided as a binary shared object and also as source. This allows the download and use of the model binary or the use of the source to explore and modify the model.

The models are run through an extensive QA and regression testing process and most model families are validated using technology provided by the processor IP owners. There is a companion document (OVP Guide to Using Processor Models) which explains the general concepts of OVP Fast Processor Models and their use. It is downloadable from the OVPworld website documentation pages.

## 1.1 Description

MIPS64 Configurable Processor Model

## 1.2 Licensing

Usage of binary model under license governing simulator usage. Source of model available under Imperas Software License Agreement.

### 1.3 Limitations

Cache model not implemented on mips64 variants

If this model is not part of your installation, then it is available for download from www.OVPworld.org/ip-vendor-mips.

### 1.4 Verification

Models have been validated correct as part of the MIPS Verified program and run through the MIPS AVP test programs

### 1.5 Features

only MIPS64 Instruction set implemented

MMU Type: Standard TLB

FPU implemented

Vectored interrupts implemented

 ${\bf MIPS16e~ASE~implemented}$ 

DSP ASE Rev 2 implemented

## Configuration

### 2.1 Location

This model's VLNV is mips.ovpworld.org/processor/mips64\_r1r5/1.0.

The model source is usually at:

\$IMPERAS\_HOME/ImperasLib/source/mips.ovpworld.org/processor/mips64\_r1r5/1.0

The model binary is usually at:

\$IMPERAS\_HOME/lib/\$IMPERAS\_ARCH/ImperasLib/mips.ovpworld.org/processor/mips64\_r1r5/1.0

### 2.2 GDB Path

The default GDB for this model is: \$IMPERAS\_HOME/lib/\$IMPERAS\_ARCH/gdb/mips-sde-elf-gdb.

## 2.3 Semi-Host Library

The default semi-host library file is mips.ovpworld.org/semihosting/mips64Newlib/1.0

### 2.4 Processor Endian-ness

This model can be set to either endian-ness (normally by a pin, or the ELF code).

## 2.5 QuantumLeap Support

This processor is qualified to run in a QuantumLeap enabled simulator.

### 2.6 Processor ELF code

The ELF code supported by this model is: 0x8.

# All Variants in this model

This model has these variants

Variant	Description
5Kf	
5Kc	
5KEf	(described in this document)
5KEc	

Table 3.1: All Variants in this model

## **Bus Master Ports**

This model has these bus master ports.

Name	min	max	Connect?	Description
INSTRUCTION	12	36	mandatory	
DATA	12	36	optional	

Table 4.1: Bus Master Ports

# **Bus Slave Ports**

This model has no bus slave ports.

# Net Ports

This model has these net ports.

Name	Type	Connect?	Description
reset	input	optional	Core reset
dint	input	optional	Debug external interrupt
hwint0	input	optional	External interrupt
hwint1	input	optional	External interrupt
hwint2	input	optional	External interrupt
hwint3	input	optional	External interrupt
hwint4	input	optional	External interrupt
hwint5	input	optional	External interrupt
nmi	input	optional	Non-maskable external interrupt
vc_run	input	optional	Set to force stop of execution on processor
			VPE (simulation control only)

Table 6.1: Net Ports

# FIFO Ports

This model has no FIFO ports.

# Formal Parameters

variant endian Endian Model endian Endian String Load a MIPS hex file (test-mode)  IMPERAS_MIPS_AVP_OPCODES Boolean Enable MIPS-specific magic Pass/Fail opcodes (specific for AVP test termination)  MIPS_TRACE Boolean Enable MIPS-format trace output  supervisorMode Boolean Override whether processor implements supervisor mode override whether processor implements supervisor mode override buse error exception behavior. When true, accesses of memory not defined by platform will cause buse error exceptions  fixedMMU Boolean Override the MMU type to fixed mapping when true (sets Config.MT=3, Config.KU/K23=2 and Config.I.MMUSizeM1=0)  removeDSP Boolean Override the DSP_present configuration when true (sets Config3.DSPP/DSP2P=0)  removeCMP Boolean Override the CMP_Present configuration when true (sets Config.I.FP to 0)  removeFP Boolean Override the FP_Present configuration when true (sets Config.I.FP to 0)  isISA Boolean Override the SP_Present configuration when true (sets Config.I.FP to 0)  isISA Boolean Deprecated - Instead set configIMMUSizeM1 to maximum value to improve performance  ITCNumEntries Doolean Deprecated - Instead set configIMMUSizeM1 to maximum value to improve performance  ITCNumFIFO Uns32 Specify number of ITC cells present (MT cores only)  MTFPU Uns32 Specify number of ITC cells present (MT cores only)  MTFPU Uns32 Specify number of ITC cells present (MT cores only)  PEDMaxTC Uns32 Specifies the maximum TCs initially on VPE0  segBits Uns32 Number of regions for memory protection unit  mpuType Uns32 Type of MPU implementation  mpuRegions Uns32 Number of regions for memory protection unit  mpuSegment0 Uns32 Attributes for segment 0 in MPU2 SegmentControl.0 reg- ister  mpuSegment1 Uns32 Attributes for segment 1 in MPU2 SegmentControl.0 reg- ister	Name	Type	Description
mipsHexFile   String   Load a MIPS hex file (test-mode)	variant		
IMPERAS_MIPS_AVP_OPCODES   Boolean   Enable MIPS-specific magic Pass/Fail opcodes (specific for AVP test termination)   Enable MIPS-fromat trace output	endian	Endian	Model endian
MIPS_TRACE Boolean Enable MIPS-format trace output SupervisorMode Boolean Doverride whether processor implements supervisor mode busErrors Boolean Override bus error exception behavior. When true, accesses of memory not defined by platform will cause bus error exceptions fixedMMU Boolean Override the MMU type to fixed mapping when true (sets Config.MT=3, Config.KU/K23=2 and Config.1.MMUSizeM1=0) removeDSP Boolean Override the DSP-present configuration when true (sets Config3.DSPP/DSP2P=0) removeCMP Boolean Override the CMP-Present configuration when true (sets Config3.DSP/DSP2P=0) removeFP Boolean Override the FP-Present configuration when true (sets Config3.FP to 0) isISA Boolean Doverride the specify ISA model (reset address from ELF, all coprocessors enabled) hiddenTLBentries Boolean Deprecated - Instead set config1MMUSizeM1 to maximum value to improve performance ITCNumEntries Uns32 Specify number of ITC cells present (MT cores only) ITCNumFIFO Uns32 Specify number of ITC FIFO cells in reference ITC implementation (MT cores only)  MTFPU Uns32 Enable multi-threaded FPU (1:old mttc1 behavior, 2:new mttc1 behavior) supportDenormals Boolean Deprecated - Instead FPU (1:old mttc1 behavior, 2:new mttc1 behavior)  SegBits Uns32 VPEOMaxTC Uns32 Specifies the maximum TCs initially on VPEO SegBits Uns32 VPEOMaxTC Uns32 Type of MPU implementation mpuType Uns32 Type of MPU implementation mpuType Uns32 Type of MPU implementation mpuEnable Boolean Enable MPU2 segment control at reset mpuSegment0 Uns32 Attributes for segment 1 in MPU2 SegmentControl.0 reg- ister	mipsHexFile	String	Load a MIPS hex file (test-mode)
MIPS-TRACE   Boolean   SupervisorMode   Boolean   Override whether processor implements supervisor mode   BusErrors   Boolean   Override bus error exception behavior. When true, accesses of memory not defined by platform will cause bus error exceptions   Override the MMU type to fixed mapping when true (sets Config.MT=3, Config.KU/K23=2 and Config.I.MMUSizeM1=0)   Override the DSP-present configuration when true (sets Config.3.DSPP/DSP2P=0)   Override the CMP-Present configuration when true (sets Config.3.DSPP/DSP2P=0)   Override the CMP-Present configuration when true (sets Config.3.DSP)   Override the Sets Config.3.DSP   Override the Sets Config.3.DSP   Override the Sets Config.3.DSP   Override the CMP-Present configuration when true (sets Config.3.DSP   Override the Sets Config.3.DSP   Override the Sets Config.3.DSP   Override the Sets Config.3.DSP   Override the CMP-Present configuration when true (sets Config.3.DSP   Override the Sets Config.3.DSP	IMPERAS_MIPS_AVP_OPCODES	Boolean	Enable MIPS-specific magic Pass/Fail opcodes (specific for
Boolean   Override whether processor implements supervisor mode			AVP test termination)
Boolean   Override bus error exception behavior. When true, accesses of memory not defined by platform will cause bus error exceptions	MIPS_TRACE	Boolean	Enable MIPS-format trace output
cesses of memory not defined by platform will cause bus error exceptions  fixedMMU  Boolean  Override the MMU type to fixed mapping when true (sets Config.MT=3, Config.KU/K23=2 and Config.MMUSizeM1=0)  removeDSP  Boolean  Override the DSP-present configuration when true (sets Config.3.DSP/DSP2P=0)  removeFP  Boolean  Override the CMP-Present configuration when true (sets Config.3.CMGCR and GCR.BASE to 0)  removeFP  Boolean  Override the FP-Present configuration when true (sets Config.1.FP to 0)  isISA  Boolean  Enable to specify ISA model (reset address from ELF, all coprocessors enabled)  hiddenTLBentries  Boolean  Deprecated - Instead set config1MMUSizeM1 to maximum value to improve performance  ITCNumEntries  Uns32  Specify number of ITC cells present (MT cores only)  ITCNumFIFO  Uns32  Specify number of ITC rells present (MT cores only)  MTFPU  Uns32  Specify number of ITC rells in reference ITC implementation (MT cores only)  Enable multi-threaded FPU (1:old mttc1 behavior, 2:new mttc1 behavior)  supportDenormals  Boolean  Enable to specify that the FPU supports denormal operands and results  VPEOMaxTC  Uns32  Specifies the maximum TCs initially on VPEO  segBits  Uns32  Override the number of address bits implemented for 64 bit segments (MIPS64 Only)  mpuRegions  Uns32  Number of regions for memory protection unit  mpuType  Uns32  Type of MPU implementation  mpuEnable  Boolean  Enable MPU2 segment 0 in MPU2 SegmentControl.0 reg-  ister  mpuSegment1  Uns32  Attributes for segment 1 in MPU2 SegmentControl.0 reg-	supervisorMode		
fixedMMU Boolean Boolean Cverride the MMU type to fixed mapping when true (sets Config.MT=3, Config.KU/K23=2 and Config.I.MMUSizeM1=0)  removeDSP Boolean Coverride the DSP-present configuration when true (sets Config3.DSPP/DSP2P=0)  removeCMP Boolean Config3.DSPP/DSP2P=0)  removeFP Boolean Coverride the CMP-Present configuration when true (sets Config3.CMGCR and GCR.BASE to 0)  removeFP Boolean Coverride the FP-Present configuration when true (sets Config1.FP to 0)  isISA Boolean Enable to specify ISA model (reset address from ELF, all coprocessors enabled)  hiddenTLBentries Boolean Deprecated - Instead set config1MMUSizeM1 to maximum value to improve performance  ITCNumEntries Uns32 Specify number of ITC cells present (MT cores only)  MTFPU Uns32 Specify number of ITC refro cells in reference ITC implementation (MT cores only)  MTFPU Uns32 Enable multi-threaded FPU (1:old mttc1 behavior, 2:new mttc1 behavior)  supportDenormals Boolean Enable to specify that the FPU supports denormal operands and results  VPEOMaxTC Uns32 Specifies the maximum TCs initially on VPE0  segBits Uns32 Override the number of address bits implemented for 64 bit segments (MIPS64 Only)  mpuRegions Uns32 Number of regions for memory protection unit  mpuType Uns32 Type of MPU implementation  mpuEnable Boolean Enable MPU2 segment control at reset  mpuSegment0 Uns32 Attributes for segment 1 in MPU2 SegmentControl.0 reg- ister	busErrors	Boolean

mpuSegment14	Uns32	Attributes for segment 14 in MPU2 SegmentControl_3 register
mpuSegment15	Uns32	Attributes for segment 15 in MPU2 SegmentControl_3 register
mvpconf0vpe	Uns32	Override MVPConf0.PVPE
mvpconf0tc	Uns32	Override MVPConf0.PTC
mvpconf0pcp	Boolean	Override MVPConf0.PCP
mvpconf0tcp	Boolean	Override MVPConf0.TCP
hasFDC	Uns32	Specify the size of Fast Debug Channel register block
statusFR	Boolean	Override power on value in Status.FR (Floating point register mode)
configDSP	Boolean	Override Config.DSP (data scratchpad RAM present)
configISP	Boolean	Override Config.ISP (instruction scratchpad RAM present)
configK0	Uns32	Override power on value of Config.K0 (set Kseg0 cacheability)
configKU	Uns32	Override power on value of Config.KU (set Useg cacheability)
configK23	Uns32	Override power on value of Config.K23 (set Kseg23 cacheability)
configMDU	Boolean	Override Config.MDU (iterative multiply/divide unit)
configMM	Boolean	Override Config.MM (merging mode for write)
configMT	Uns32	Override Config.MT
configSB	Boolean	Override Config.SB (simple bus transfers only)
MIPS16eASE	Boolean	Override Config1.CA (enables the MIPS16e ASE)
config1EP	Boolean	Override Config1.EP (EJTag present)
config1MMUSizeM1	Uns32	Override Config1.MMUSizeM1 (number of MMU entries- 1)
config1WR	Boolean	Override Config1.WR (watchpoint registers present)
config1FP	Boolean	Override Config1.FP (FPU present)
config3BI	Boolean	Override Config3.BI
config3BP	Boolean	Override Config3.BP

C octores		
config3CDMM	Boolean	Override Config3.CDMM
config3CTXTC	Boolean	Override Config3.CTXTC
config3DSPP	Boolean	Override Config3.DSPP
config3DSP2P	Boolean	Override Config3.DSP2P
config3IPLW	Uns32	Override Config3.IPLW
config3ISA	Uns32	Override Config3.ISA
config3ISAOnExc	Boolean	Override Config3.ISAOnExc
config3ITL	Boolean	Override Config3.ITL
config3LPA	Boolean	Override Config3.LPA
config3MCU	Boolean	Override Config3.MCU
config3MMAR	Uns32	Override Config3.MMAR
config3RXI	Boolean	Override Config3.RXI
config3SC	Boolean	Override Config3.SC
config3ULRI	Boolean	Override Config3.ULRI
externalinterrupt	Boolean	Override Config3.VEIC (enables the use of an external in-
		terrupt controller)
vectoredinterrupt	Boolean	Override Config3.VInt (enables vectored interrupts)
config3VZ	Boolean	Override Config3.VZ
config4AE	Boolean	Override Config4.AE
config4IE	Uns32	Override Config4.IE
config4MMUConfig	Uns32	Override Config4.MMUConfig field (interpretation de-
88	0 0 -	pends on MMUExtDef value)
config4MMUExtDef	Uns32	Override Config4.MMUExtDef
config4VTLBSizeExt	Uns32	Override Config4.VTLBSizeExt
config5EVA	Boolean	Override Config5.EVA
config5NFExists	Boolean	Override Config5.NFExists
config5MSAEn	Boolean	Override Config5.MSAEn
config6FTLBEn	Boolean	Override Connigs.MISAEII  Override power on value of Config6.FTLBEn
config7DCIDX_MODE	Uns32	Override Config7.DCIDX_MODE
config7WII	Boolean	Override Config7. WII (wait IE/IXMT ignore)
fcsrABS2008	Boolean	Override Colling 7. WIT (wait 1E/1AMT ignore)  Override FCSR.ABS2008 (ABS/NEG compliant with
ICSI ADS2008	Doolean	IEEE 754-2008)
fcsrNAN2008	Boolean	Override FCSR.NAN2008 (QNaN/SNaN encodings match
ICSTNAN2008	Doolean	
firPS	Boolean	IEEE 754-2008 recommendation)
firHas2008		Override FIR.PS (PS floating point type implemented)
nrhas2008	Boolean	Override FIR.Has2008 (one or more IEEE 754-2008 fea-
: + -HDED C	TT 00	tures present) Override IntCtl.IPFDC
intctlIPFDC	Uns32	
intctlIPTI	Uns32	Override IntCtl.IPTI
pridRevision	Uns32	Override PRId.Revision
srsctlHSS	Uns32	Override SRSCtl.HSS (number of shadow register sets)
ExceptionBase	Uns32	Specify the BEV Exception Base address. (use GCR_Cx_RESET_BASE on CMP processors)
UseExceptionBase	Boolean	Set to one to use ExceptionBase[29:12] as the correspond-
		ing BEV address bits
EIC_OPTION	Uns32	Override the external interrupt controller EIC_OPTION
ISPRAM_SIZE	Uns32	Encoded size of the ISPRAM region (log2( <ispram size<="" td=""></ispram>
		in bytes>) - 11)
ISPRAM_BASE	Uns64	Starting physical address of the ISPRAM region
ISPRAM_ENABLE	Boolean	Set the enable bit of the ISPRAM region's tag (used to
		enable the ISPRAM region prior to reset)
ISPRAM_FILE	String	Load a MIPS hex file into the ISPRAM region prior to
	~~8	reset
DSPRAM_SIZE	Uns32	Encoded size of the DSPRAM region (log2( <dspram< td=""></dspram<>
	011002	size in bytes>) - 11)
DSPRAM_BASE	Uns64	Starting physical address of the DSPRAM region
	0.1100-1	parama parjorom address of the Dot 101101 1081011

DSPRAM_ENABLE	Boolean	Set the enable bit of the DSPRAM region's tag (used to
		enable the DSPRAM region prior to reset)

## Hierarchy of the model

A CPU core may be configured to instance many processors of a Symmetrical Multi Processor (SMP). A CPU core may also have sub elements within a processor, for example hardware threading blocks.

OVP processor models can be written to include SMP blocks and to have many levels of hierarchy. Some OVP CPU models may have a fixed hierarchy, and some may be configured by settings in a configuration register. Please see the register definitions of this model.

This model documentation shows the settings and hierarchy of the default settings for this model variant.

### 11.1 Level 1: CPU

This level in the model hierarchy has 16 commands. This level in the model hierarchy has 5 register groups:

Group name	Registers
Core	33
FPU	34
DSP	9
COP0	32
Integration_support	1

Table 11.1: Register groups

This level in the model hierarchy has no children.

## **Model Commands**

A Processor model can implement one or more **Model Commands** available to be invoked from the simulator command line, from the OP API or from the Imperas Multiprocessor Debugger.

### 12.1 Level 1: CPU

### 12.1.1 isync

specify instruction address range for synchronous execution

Argument	Type	Description
-addresshi	Uns64	end address of synchronous execution range
-addresslo	Uns64	start address of synchronous execution range

Table 12.1: isync command arguments

#### 12.1.2 itrace

enable or disable instruction tracing

Argument	Type	Description
-after	Uns64	apply after this many instructions
-enable	Boolean	enable instruction tracing
-instructioncount	Boolean	include the instruction number in each trace
-memory	String	show memory accesses by this instruction. Ar-
		gument can be any combination of X (execute),
		L (load or store access) and S (system)
-off	Boolean	disable instruction tracing
-on	Boolean	enable instruction tracing
-processorname	Boolean	Include processor name in all trace lines
-registerchange	Boolean	show registers changed by this instruction
-registers	Boolean	show registers after each trace

Table 12.2: itrace command arguments

### 12.1.3 mipsCOP0

query a COP0 register value using <register><select>

Argument	Type	Description
-register	Uns32	specify the COP0 register number
-select	Uns32	specify the COP0 register select

Table 12.3: mipsCOP0 command arguments

### 12.1.4 mipsCacheDisable

### 12.1.4.1 Argument description

Disables tag or full cache model

### 12.1.5 mipsCacheEnable

enable tag or full cache model

Argument	Type	Description
-debug	Uns32	set cache model debug flags
-full	Boolean	enable full cache model
-tag	Boolean	enable cache tag line only model

Table 12.4: mipsCacheEnable command arguments

### 12.1.6 mipsCacheRatio

Report current hit ratio for selected cache

Argument	Type	Description
-dcache	Boolean	report hit ratio for dcache
-icache	Boolean	report hit ratio for icache

Table 12.5: mipsCacheRatio command arguments

### 12.1.7 mipsCacheReport

#### 12.1.7.1 Argument description

Report current cache statistics

#### 12.1.8 mipsCacheReset

#### 12.1.8.1 Argument description

reset the cache model

### 12.1.9 mipsCacheTrace

Control the tracing of cache accesses

Argument	Type	Description
-noartifact	Boolean	filter artifact accesses
-nocached	Boolean	filter cached accesses
-nodcache	Boolean	filter dcache accesses
-noicache	Boolean	filter icache accesses
-notrue	Boolean	filter true accesses
-nouncached	Boolean	filter uncached accesses
-off	Boolean	turn off the cache tracing
-on	Boolean	turn on the cache tracing

Table 12.6: mipsCacheTrace command arguments

### 12.1.10 mipsDebugFlags

Set the processor model debug flags to <value>

Argument	Type	Description
-value	Uns32	specify model debug flags

Table 12.7: mipsDebugFlags command arguments

#### 12.1.11mipsReadRegister

Read a processor register using <resource><offset>

Argument	Type	Description
-offset	Uns32	the processor register offset
-resource	Uns32	the processor register resource number

Table 12.8: mipsReadRegister command arguments

### 12.1.12 mipsReadTLBEntry

read a TLB entry specified by the index

Argument	Type	Description
-index	Uns64	select the TLB entry

Table 12.9: mipsReadTLBEntry command arguments

### 12.1.13 mipsTLBDump

#### 12.1.13.1 Argument description

Dumps the current contents of the TLB

### 12.1.14 mipsTLBGetPhys

Reports the entry(s) in the TLB that match the given virtual address and ASID

Argument	Type	Description
-asid	Uns64	ASID
-va	Uns64	virtual address

Table 12.10: mipsTLBGetPhys command arguments

### 12.1.15 mipsWriteRegister

Write to a processor register using <resource><offset><value>

Argument	Type	Description
-offset	Uns32	the register offset number
-resource	Uns32	the register resource number
-value	Uns64	the register value to be written

Table 12.11: mipsWriteRegister command arguments

### 12.1.16 mipsWriteTLBEntry

Writes values to a TLB entry using the index, lo0, lo1, hi0 and mask fields

Argument	Type	Description
-hi0	Uns64	the TLB entry high address
-index	Uns64	the TLB entry index
-lo0	Uns64	the TLB entry low address 0
-lo1	Uns64	the TLB entry low address 1
-mask	Uns64	the TLB entry mask

Table 12.12: mipsWriteTLBEntry command arguments
